USER EXPERIENCE

Quad-Core CPU 22" touchscreen panel, 1920x1080 full HD for an e-commerce-like user experience.

The screen provides a menu where the consumer can browse product descriptions, promotional images and videos.

REAL-TIME DATA SERVICE

Magex provides a vending machine real-time management service, thanks to our web-based interface accessible from virtually any kind of device.

You can check real-time selling statistics, stock status, actual stock for every currency denomination.

You will be able to monitor the internal temperature and visualize it in a chart.

MAGEX PATENTED DISPENSING SYSTEM

Magex vending machines boast unprecedented flexibility in managing **very different items**.

Our **Conveyor patented dispensing system** fits any kind of product, also combining adjacent lanes to move larger products.

End-user can **easily customize lanes** setup to manage effectively any size and shape item to sell.

Moreover, interlocking partitions keep items separate into the same lane.

Our advanced multi-function self-diagnostic tool performs a continuous system health check, starting from lanes operation status before each delivery up to a full system reboot if needed.

ALASKA 12

GENTLE DELIVERY SYSTEM

An internal lift, with conveyor belt, takes the products and slide them towards the withdrawal area under the monitor.

Magex vending machines are engineered for delicate, fragile products of any shape such as such as frozen cakes or icecreams.

FROZEN SELF SERVICE

The powerful thermal insulation and cooling system set the machine to the desired **negative temperature**.

Suitable for any kind of frozen product, such as ice-creams, ready-meals, or prepacked pizzas.

Alaska can be matched to a **microwave column** to heat the purchased products.
